PROFESSIONAL WIRELESS HEADSET WITH CHARGING DOCK

Sonar 80 is a unique wireless headset designed for professional use. It differs greatly from consumer bluetooth headphones in its focus on the needs of business applications. Following the traditions of headset with docking station, it prevents misplacing of the headset and allows quick power charge between extended calls. Yet, more importantly, Sonar 80 places even higher emphasis on its audio performance. Understand the need for powerful active noise-cancellation in busy work environments, Accutone decided to build a proprietary noise-cancelling algorithm on top of Qualcomm's default CVC solution, resulting with unparalleled signal-to-noise ratio.

Sonar 80 also offers Dual Mode. While the USB-C connector is designed for charging only, user can connect to a wide variety of audio devices using a 3.5mm connecting cable. Multi-point pairing allows users to quickly switched between previously paired bluetooth devices. Sonar 80 provides quick microphone mute via a button on the end of the mic-boom, simple yet functional.

On top of microphone performance, Sonar 80 places great focus on speaker output as well. It supports aptX-HD codec, paired with its powerful high-fidelity 40mm loudspeakers, offers superb audio output for both voice and multimedia usage.
