R1M PRO | BLUETOOTH SPEAKERPHONE FOR CONFERENCE CALLS

HEAR CLEARLY, SPEAK FREELY

R1M PRO

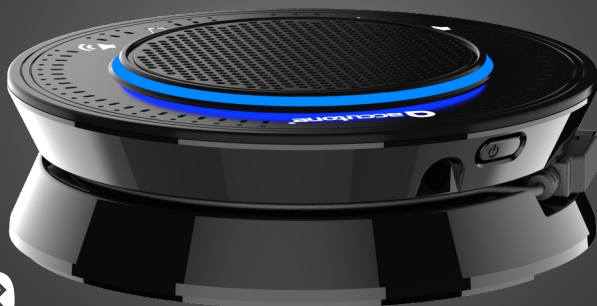

Continuing the success of the widely popular R1M series speakerphone for conferencing, Accutone® is proud to introduce R1M PRO, our first USB & Bluetooth Speakerphone for professional business users as well as advanced personal applications. R1M PRO is tuned for Microsoft Teams and Skype for Business, which means the loudspeaker performance as well as the microphone's reception and echo-cancellation are designed to match perfectly with these applications, as well as with most Unified Communications softwares.

R1M PRO offers Hi-Fi USB mode with an additional digital audio controller on top of the bluetooth chipset to offer true HD audio for music listening, on top of voice communication mode with digital echo cancellation. Completely driver-free plug-and-play, switching between these modes are 100% automatic and seamless, a feature you don't find with most conference machines in the market. Using the latest bluetooth technology by Qualcomm®, R1M PRO supports aptX™ for high-end wireless audio playback, as well as cVc™ 8.0 Noise-Cancellation Technology on its microphone.

20 hours of continuous wireless usage makes R1M PRO one of the longest-lasting product in terms of battery. The USB-connecting cable acts also as a charging cable, so users can continue their conversation by switching to USB mode, all the while recharging the unit. In terms of interface, R1M PRO includes touch-sensitive keys for answer-call*, volume-adjustments, mute, music-play and pause. It also comes with hard switch for power on/off and bluetooth pairing. The eye-catching multi-colored LED ring offers status, volume level and mode indications. R1M PRO also comes with a 3.5mm output port.

*Answer-call key does not support all applications in either USB or bluetooth modes, please consult sales agent for more information.
