Conference In Motion

R1M

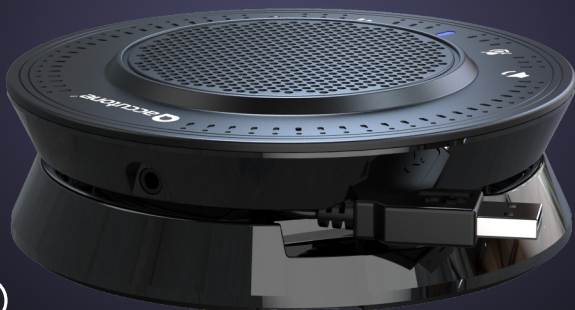

Conference calls are the most crucial part of any business communications. Using the right tools can turn any conversation into a productive business opportunity. This is why Accutone® is proud to introduce **R1M - USB Speakerphone**, a professional grade conference unit that connects via USB to any desktop or notebook computers. The R1M is a compact yet powerful speakerphone with Unified Communication adaptability, supporting and controlling software such as Skype for Business.

With high-fidelity HD audio output and superb hardware echo-cancellation, R1M is more than just a speakerphone for business use. Whether a conference call within the office or a joint video meeting out on the field, this compact yet powerful device is the basis for professional collaboration via UC software or generic VOIP applications.

Simple Plug-n-Play solution that connects through USB port on PC or Mac, with 3.5mm headphone port for private calls, the R1M is simple but reliable. Sharp-looking compact design with cable neatly wound up and stored, R1M is perfect for business travelers, users can carry it around in their briefcase, turning any coffee shop into a conference room instantly.

In terms of audio, by removing the restraints of wireless audio compression, the R1M can fully utilize the noise-canceling and wideband output performance one comes to expect from Accutone's professional audio technology. Interested in a live demonstration? Contact an Accutone representative today!
