**FLAGSHIP ANC + ENC WIRELESS HEADSET WITH DOCKING**

There is no question about it, the flagship Sonar 85 wireless headset system is the most complete headset solution from Accutone®. It has combined years of technology in acoustics algorithms, bluetooth wireless technologies, and noise cancellation experience to build the ultimate headset. Everything you can imagine needing, Sonar 85 has it.

Both a bluetooth wireless headset using Qualcomm chipset and a versatile multi-platform wired USB headset, Sonar 85 is the first to employ **Fusion™** - the technology to offer active noise cancelling for BOTH speaker and microphone for BOTH bluetooth and USB modes. Numerous microphones pick up environment sound and cancels out the noises in the speaker (ANC), as well as noise transmitting through the microphone (ENC). So even in the noisiest environment, you can listen and speak clearly without any interruptions.

Other jammed packed features include, Microsoft Teams hook switch in both wireless and wired modes, UAC dongle that allows any non-bluetooth computer to use Sonar 85 as a wireless USB headset with zero driver installation, Multi-point Pairing, stand-alone mute button, Qualcomm aptX HD, USB Type C charging...etc. Still, Sonar 85 can easily outshine competitors with its elegant but durable design, the use of dual headband for strength and comfort, while supporting the option to pair with a charging dock.
