PERSONAL CONFERENCE, ANYWHERE

R1M LITE

Continuing the success of the widely popular R1M series speakerphone for conferencing, Accutone® is proud to introduce **R1M Lite**, a palm-sized bluetooth wireless speakerphone designed for small-group conference, on-the-go.

Focused on mobility and convenience, R1M Lite fits easily in your pocket, yet is able to generate desktop size speakerphone output volume and omni-direction microphone pickup. Connected via bluetooth to your smartphone, tablet or notebook, R1M Lite support multi-point pairing, so user can simultaneously connect to more than one device, and easily switch between them.

A challenge with small speakerphone such as R1M Lite is the tradeoff between microphone sensitivity and speaker performance. The better the audio output, the lower the microphone sensitivity can be; otherwise feedback or echo will occur. However, R1M Lite has a unique design to conquer this problem. Flip out the stand at the bottom of the unit, and stand it vertically, the audio output will be boosted and bass level increase. This mode is perfect for enjoying music and videos. With the stand still flip open, face the unit upwards, and this is the conversation mode, designed to have better microphone pickup and lower output volume. Give it a try.

Other features of R1M Lite include simple to use interface with AVRCP, and digital volume control buttons, a dedicated microphone mute button, quick USB Type-C charging port and long-lasting battery with up to 20 hours of continuous usage.
