HOOK SWITCH

Many products claim this, but rarely is it as true as the brand new Sonar 60 dual-mode wireless headset from Accutone®. First of all, it highlights the reliable and comprehensive bluetooth solution from Qualcomm. It serves both as a wireless headset as well as a full-function wired USB headset, 100% driver-free and operational during headset charging. Comes equipped with two microphones, Sonar 60 offers Active Noise Cancellation using dual-mic CVC by Qualcomm.

Sonar 60 also comes with Accutone's MicArmMute™ technology, so user can quickly mute the headset microphone by swivelling the mic boom upwards. Compatible and designed for Microsoft Teams, Sonar 60 includes a hook switch to quickly answer or end calls. That's not all, Sonar 60 further supports Multi-point Pairing, so it can be switched between two or more devices quickly if previously paired.

Mono or Stereo versions of Sonar 60 are equally comfortable and lightweight, designed for extensive usage. With 14 hours of continual usage, this is the perfect business headset for executives and professionals alike. As an optional model, Sonar 60 can come with its own UAC bluetooth dongle, offering better security, easier connectivity, higher reliability and interactive control to MS Teams on your desktop or notebook computers.
